

Six Flags New England	
SUBJECT: WASTE OIL PROCEDURE	SAFETY REFERENCE MANUAL
SECTION: 37	
EFFECTIVE: January 2016	SUPERSEDES: ALL PREVIOUS

### **37.1 PURPOSE**

Six Flags New England monitors very closely any waste that it generates. Waste oil, a non-hazardous waste, is generated in large quantities at the Park. Since waste oil is a petroleum-based product, it is regulated under the Park's SPCC plan. All precautions must be taken to assure that the waste oil remains uncontaminated from another source which might turn the waste oil into a hazardous waste.

### **37.2 PROCEDURE**

- A. All waste oil must be stored in containers no larger than 5 gallons. This is to ensure that there can be no large spill and that containers can be safely handled when transferring the liquid into the 55 gallon waste oil tank.

If it is required to store waste oil in larger containers, this must be approved by the Safety Department. Spill prevention procedures must be reviewed and implemented.

- B. All waste oil must be transferred to the 5-gallon storage tank that is on the property. Under no circumstances shall waste oil be allowed to sit in containers for any period of time. Once the waste is generated, it must be emptied into the tank.
- C. The waste oil tank is to be locked in a secure location or otherwise made secure.
- D. When emptying waste oil into the tank, inspect the inside of the tank first to determine how much product is in the tank. If the tank is full, do not put any more products into the tank. If the tank is nearly full after putting product in, notify Operations Base at extension 3200 to arrange a pickup.
- E. If a spill occurs, alert Unit 900, 500 or call extension 3200 to report the situation, Fire/Safety or Security staff will respond and assess the problem.
